ST. LOUIS PARK PLANT - OPERATIONS

US EPA RECORDS CENTER REGION 5

514615

Thank you for your letter of May 10, instructing us to be particularly cautious concerning our complying with city regulations.

At present we are under an extensive program of general yard cleanup. So far we have accomplished a cleanup in the north end of our yard that was very unsightly as a result of dumping scrap of all kinds in this area. We now have our sanitary truck required so it may travel on the highway and it is our intention to schedule the removal of waste products to a dumping area on our regular basis.

Our big problem lies in the disposal of water and we have under consideration a possible revision to our present waste drain collection system. After more investigation, it may be possible that we will have to recommend the installation of a new tile around our yard for the removal of water. Our present tile has been giving us increasing difficulty and many broken tiles have had to be replaced. Our drainage system has been extremely costly in repair and maintenance lately, and some corrective measures are going to have to be taken. We will check our fire prevention organization to see that we are equipped for the summer months.

Yours very truly,

S. L. Finch
